HUAWEI PRACTICE COMPETITION 2025/2026

Cloud Track — Section 2: Multiple-Answer Questions

Total Questions: *30* | ***Marks:*** *8 marks per question (240 Marks Total)* | ***Instructions:*** *Select* ***ALL*** *correct options (two or more). Partial credit is not awarded.*

Question 71 [8 Marks — Select All Correct Options]

In a Kubernetes architecture, which of the following components are deployed on master nodes?

A. API server

B. kubelet

C. Controller manager

D. Scheduler

Question 72 [8 Marks — Select All Correct Options]

An enterprise is deploying a microservice architecture on Huawei Cloud Container Engine (CCE). To ensure functionality, networks must be reachable in every scenario. Which of the following communication modes are supported by Kubernetes?

A. Pods on different nodes communicate directly with each other via pod IP addresses, enabled by Container Network Interface (CNI) plugins, for example, Calico.

B. Kubernetes exposes pods to external networks via Services like NodePort and LoadBalancer, or through ingresses.

C. In the Service-to-pod load balancing scenario, kube-proxy manages iptables or IPVS rules to distribute traffic.

D. Containers within the same pod communicate with each other via localhost and a shared network namespace.

Question 73 [8 Marks — Select All Correct Options]

A financial enterprise uses Huawei Cloud Web Application Firewall (WAF) to protect its online transaction system. Which of the following statements about WAF functions are false?

A. Supported protocols: Security controls, such as WebSocket and SSE, are disabled by default. Customers need to enable and configure these security controls manually.

B. Data masking: WAF can automatically mask fields such as bank card numbers and ID card numbers in attack logs.

C. Precise protection: WAF can protect against CC attacks based on conditions such as geographical locations and HTTP headers.

D. Supported ports: Only standard ports such as 80 and 443 are supported. AAD is required to protect non-standard ports.

Question 74 [8 Marks — Select All Correct Options]

An e-commerce platform plans to use Huawei Cloud Auto Scaling (AS) to handle traffic fluctuations during promotions. Multiple scaling policies need to be configured to intelligently schedule resources. Which of the following policies can be used for automatic scaling?

A. Periodic policy: AS adds 30% more ECSs at 18:00 every Friday to handle weekend traffic peaks.

B. Alarm policy: AS automatically adds two Elastic Cloud Servers (ECSs) when the CPU usage exceeds 80% for 5 minutes.

C. Scheduled policy: AS adds 20 ECSs at 00:00 on November 11.

D. Manual policy: O&M personnel manually adjust the number of ECSs on the console.

Question 75 [8 Marks — Select All Correct Options]

Object Storage Service (OBS) offers a range of resource management tools. Which of the following statements about these tools are false?

A. OBS Browser+ is a graphical Windows client that lets you manage OBS resources from your desktop with ease.

B. obsfs is a GUI tool for accessing and managing OBS resources. It is recommended for batch processing and automated tasks.

C. obsfs is used to mount OBS buckets, but cannot be used to mount OBS parallel file systems.

D. obsutil is a tool based on Filesystem in Userspace (FUSE). It is used to mount OBS parallel file systems to Linux.

Question 76 [8 Marks — Select All Correct Options]

A financial institution plans to migrate its mission-critical databases to Huawei Cloud Relational Database Service (RDS) in compliance with DJCP Multi-level Protection Scheme (MLPS) L3 requirements. Which of the following security capabilities are supported by RDS?

A. Vulnerability scan: The system automatically detects database patch statuses and generates suggestions.

B. Transmission encryption: SSL/TLS 1.2+ is enforced to prevent man-in-the-middle attacks from compromising communications.

C. Network isolation: Instance-level access control is implemented using security groups and subnets.

D. Storage encryption: The Key Management Service (KMS) keys are used to encrypt disk data with AES-256.

Question 77 [8 Marks — Select All Correct Options]

Which of the following are benefits of migrating enterprise applications to Huawei Cloud?

A. Reduced total cost of ownership (TCO) through pay-as-you-go billing

B. Elastic scaling to handle traffic fluctuations

C. High availability with multi-AZ disaster recovery

D. Complete elimination of local application maintenance responsibility

Question 78 [8 Marks — Select All Correct Options]

Which of the following cloud services provide network security protection on Huawei Cloud?

A. Web Application Firewall (WAF)

B. Advanced Anti-DDoS (AAD)

C. Security Group

D. Elastic Load Balance (ELB)

Question 79 [8 Marks — Select All Correct Options]

An AI startup is deploying a machine learning training platform on Huawei Cloud Container Engine (CCE). They require high-performance persistent storage for their workloads. Which of the following Huawei Cloud storage volumes can be directly mounted to a container using a PersistentVolumeClaim (PVC)?

A. Elastic Volume Service (EVS)

B. SFS Turbo

C. Scalable File Service (SFS)

D. Object Storage Service (OBS)

Question 80 [8 Marks — Select All Correct Options]

An enterprise uses Huawei Cloud to deploy services. Their Elastic Cloud Servers (ECSs) are deployed in different Virtual Private Clouds (VPCs) (such as a finance VPC and an R&D; VPC) in the same region. To allow these ECSs to share files across VPCs and meet the low-latency, high-throughput requirements at the same time, which of the following are feasible solutions?

A. Using obsfs to mount Object Storage Service (OBS) parallel file systems to Linux servers

B. Using SFS Turbo and configuring VPC peering connections to enable communications between two or more VPCs in the same region

C. Creating shared Elastic Volume Service (EVS) disks and manually attach them to the ECSs in each VPC

D. Using Scalable File Service (SFS) and configuring multi-VPC access

Question 81 [8 Marks — Select All Correct Options]

Which of the following are core features of Relational Database Service (RDS) on Huawei Cloud?

A. Automated automated backup and point-in-time recovery

B. High availability active/standby deployment

C. Read replica support for read-write splitting

D. Automatic NoSQL schema generation

Question 82 [8 Marks — Select All Correct Options]

O&M; personnel uses Log Tank Service (LTS) to monitor their company system and finds that some logs cannot be viewed on the console. Which of the following are possible causes?

A. Slow browser: There are too many log requests.

B. ICAgent not installed: The log collection client is not deployed on the host and data is not collected.

C. Log group expiration: The log retention duration is set to one day and logs have been automatically deleted.

D. Insufficient IAM permissions: The current account does not have the LTS ReadOnlyAccess policy.

Question 83 [8 Marks — Select All Correct Options]

Which of the following components are part of the Huawei Cloud Stack management platform ManageOne?

A. Operation Center

B. Service Center

C. Service OM

D. eSight

Question 84 [8 Marks — Select All Correct Options]

Which of the following statements are true about Docker core components?

A. OverlayFS uses a tiered storage driver based on the copy-on-write (CoW) strategy to enhance image storage efficiency.

B. containerd is a daemon for container runtime. It manages images and container lifecycle.

C. kubelet is a core component of Kubernetes. It is used to directly create Docker containers.

D. Namespaces isolate resources like processes and networks. They allow each container to have an independent PID, IPC, and network space.

Question 85 [8 Marks — Select All Correct Options]

Which of the following are primary use cases for FunctionGraph on Huawei Cloud?

A. Event-driven data processing (e.g. OBS file upload triggers)

B. Building lightweight RESTful microservice APIs

C. Running long-duration, stateful monolithic enterprise databases

D. Scheduled backend cron tasks

Question 86 [8 Marks — Select All Correct Options]

Which of the following security mechanisms can be used to protect data stored in Object Storage Service (OBS)?

A. Server-side encryption (KMS / SSE-OBS)

B. Bucket ACLs and Bucket Policies

C. Transport encryption via HTTPS/SSL

D. Stateful security group ingress filtering

Question 87 [8 Marks — Select All Correct Options]

An e-commerce platform plans to use Auto Scaling (AS) of Huawei Cloud to handle traffic fluctuations during promotions. Multiple scaling policies need to be configured to intelligently schedule resources. Which of the following are AS policies provided by Huawei Cloud?

A. Alarm policy: AS adds instances automatically when the CPU usage exceeds 80%.

B. Periodic policy: AS adds 50% more instances every Friday to handle weekend traffic.

C. Priority policy: AS removes instances of specific flavors preferentially.

D. Scheduled policy: AS adds two instances at 20:00 every day to handle evening peaks.

Question 88 [8 Marks — Select All Correct Options]

Which of the following are key components of the ModelArts AI development platform?

A. Data Management and Labeling

B. Algorithm Development Environment (JupyterLab)

C. Distributed Model Training

D. Model Deployment & Management (Real-time / Batch)

Question 89 [8 Marks — Select All Correct Options]

Which of the following are optimization methods for foundation model inference?

A. KV caching
B. Pruning
C. Quantization
D. Distillation

Question 90 [8 Marks — Select All Correct Options]

Which of the following are voice processing tasks in AI?

A. Language generation
B. Language understanding
C. Text To Speech (TTS)
D. Speech recognition

Question 91 [8 Marks — Select All Correct Options]

Standard normal distribution is a special form of normal distribution. Which of the following statements about standard normal distribution are true?

A. The variance is 0.
B. The variance is 1.
C. The average value is 0.
D. The average value is 1.

Question 92 [8 Marks — Select All Correct Options]

Which of the following are activation functions of a neural network?

A. ReLU
B. Softplus
C. Sigmoid
D. Softmax

Question 93 [8 Marks — Select All Correct Options]

Dropout is a widely used regularization technique in deep learning. Which of the following are the main functions of dropout?

A. Preventing overfitting
B. Feature extraction
C. Dimension reduction
D. Enhancing model generalization

Question 94 [8 Marks — Select All Correct Options]

Which of the following statements about feature selection methods in text classification are true?

A. Support vector machine (SVM)
B. Information gain
C. Chi-squared test
D. Mutual information

Question 95 [8 Marks — Select All Correct Options]

Which of the following are function modules of CANN (Compute Architecture for Neural Networks)?

A. TBE (Tensor Boost Engine)

B. Underlying compiler

C. FusionEngine

D. CCE operator library

Question 96 [8 Marks — Select All Correct Options]

During neural network training, which of the following tasks are finished before the loss function value is calculated?

A. The model receives input data features and makes predictions by means of forward propagation.

B. The network structure is defined and learnable parameters are initialized.

C. The model reaches convergence and the training ends.

D. Learnable parameters are updated using the gradient descent and backpropagation algorithms to minimize the loss value.

Question 97 [8 Marks — Select All Correct Options]

Which of the following AI engines are supported by ModelArts?

A. MXNet

B. TensorFlow

C. MindSpore

D. PyTorch

Question 98 [8 Marks — Select All Correct Options]

Which of the following statements are true about the advantages of MindSpore?

A. Collaborative optimization with MindSpore and Ascend AI Processors significantly improves operation efficiency and computing performance.

B. MindSpore supports object-oriented and function-oriented programming paradigms, both of which can be used to build network algorithms and training processes.

C. MindSpore natively adapts to each scenario and supports on-demand synergy across devices, edges, and the cloud, as well as flexible deployment.

D. Implementing AI algorithms as code makes the develop time more friendly to developers, significantly reducing the time required for model development and lowering the bar for new developers.

Question 99 [8 Marks — Select All Correct Options]

Which of the following statements about the standard RNN model is false?

A. There is a one-to-one model structure.

B. There is no many-to-many model structure.

C. The time direction element is irrelevant during backpropagation.

D. There is a one-to-many model structure.

Question 100 **[8 Marks — Select All Correct Options]**

Which of the following are basic image recognition tasks in Computer Vision?

A. Image classification

B. Image segmentation

C. Object detection

D. Object tracking
