HUAWEI PRACTICE COMPETITION 2025/2026

Cloud Track — Section 1: Single-Answer Questions

Total Questions: *70* | ***Marks:*** *8 marks per question (560 Marks Total)* | ***Instructions:*** *Select the SINGLE best answer (A, B, C, or D) for each question.*

Question 1 [8 Marks]

Which of the following load balancing algorithms is not supported by shared and dedicated load balancers?

A. Weighted round robin

B. Source IP hash

C. Destination IP address

D. Weighted least connections

Question 2 [8 Marks]

Which of the following is not a requirement for creating a Virtual Private Cloud (VPC) peering connection?

A. The two VPCs must be in the same region.

B. The CIDR blocks of the two VPCs cannot overlap.

C. The two VPCs must belong to the same project.

D. Routes must be configured for both VPCs.

Question 3 [8 Marks]

An enterprise connects its on-premises network to a VPC through a Direct Connect connection. As the business grows, they need another VPC in the same region, which also needs to communicate with the on-premises network. To reduce costs, the enterprise wants to reuse the existing Direct Connect connection. Which of the following solutions is not cost-effective?

A. The enterprise can buy a VPN connection to connect the VPCs to the on-premises network.

B. The enterprise needs to add the CIDR block of the new VPC to the local subnet of the Direct Connect connection.

C. The enterprise can create a VPC peering connection between the two VPCs, and add required routes.

D. The enterprise needs to add routes on the on-premises gateway with the destination pointing to the VPCs.

Question 4 [8 Marks]

A company plans to deploy applications in the CN South-Guangzhou and CN East-Shanghai regions and uses Cloud Connect to enable network communications between the two regions. Which of the following statements about Cloud Connect is false?

A. The subnets of the VPCs loaded to a cloud connection cannot conflict with each other.

B. Cloud Connect can connect VPCs of different accounts.

C. Cloud Connect can connect VPCs in different regions.

D. Cloud Connect can only connect VPCs of the same account.

Question 5 [8 Marks]

Which of the following statements about Elastic Load Balance (ELB) listeners is false?

A. A listener checks user requests and routes traffic to backend server groups based on configured rules.
B. A load balancer can have multiple listeners configured.
C. Listeners support Layer 4 (TCP/UDP) and Layer 7 (HTTP/HTTPS) protocols.
D. A listener can only be bound to one backend server group.

Question 6 [8 Marks]

Which of the following is an advantage of Virtual Machines (VMs) over containers?

A. Fine granularity and high resource utilization
B. Startup in seconds
C. Lightweight with fewer resources
D. Better isolation

Question 7 [8 Marks]

Which of the following statements about Dedicated Distributed Storage Service (DSS) is false?

A. DSS disks cannot be expanded while services are running.
B. Backups can be created for disks in the dedicated storage.
C. Three-copy redundancy based on the dedicated distributed storage is available.
D. The capacity of storage pools can be expanded based on service requirements.

Question 8 [8 Marks]

Which of the following statements about FunctionGraph is false?

A. FunctionGraph supports event functions and HTTP functions.
B. You can just write your code and set running conditions without provisioning or managing servers.
C. FunctionGraph supports multiple runtimes, including Node.js, Java, Python, and Go.
D. After a function is created, you cannot edit it inline.

Question 9 [8 Marks]

An enterprise plans to migrate an on-premises Oracle database to Huawei Cloud RDS for MySQL. Which of the following tools is recommended for database schema conversion and data migration?

A. Data Admin Service (DAS)
B. Data Replication Service (DRS)
C. Database Security Service (DBSS)
D. Distributed Database Middleware (DDM)

Question 10 [8 Marks]

Which of the following statements about Object Storage Service (OBS) storage classes is correct?

A. Standard storage class is suitable for storing data that is accessed infrequently.
B. Warm storage class is suitable for real-time data analysis and high-frequency access.
C. Cold (Archive) storage class requires data restoration before access.
D. Deep Archive storage class allows immediate data access without restoration delay.

Question 11 [8 Marks]

Which of the following components in Huawei Cloud Stack provides centralized identity authentication and access permission control?

A. ManageOne

B. IAM

C. Service OM

D. eSight

Question 12 [8 Marks]

An enterprise plans to build a hybrid cloud security system, with some services deployed on Huawei Cloud and others maintained in its local data center. Which of the following statements is false about Huawei Cloud security services?

A. Advanced Anti-DDoS protects only resources on Huawei Cloud. Local data centers cannot be protected.

B. Web Application Firewall (WAF) protects external IDC services through CNAME access.

C. Data Encryption Workshop (DEW) provides unified key management for OBS, EVS, and local storage on the cloud.

D. Host Security Service (HSS) requires an agent installed on the local server to provide intrusion detection.

Question 13 [8 Marks]

A game company develops a global multiplayer online game. Frequently updating gameplay requires dynamic adjustment of data models (for example, adding equipment attributes and season rules). Which of the following Huawei Cloud database services is the most suitable for minimizing the impact of database changes on online players?

A. Database Security Service (DBSS)

B. Distributed Database Middleware (DDM)

C. Document Database Service (DDS)

D. Data Admin Service (DAS)

Question 14 [8 Marks]

Which of the following storage protocols is used by Scalable File Service (SFS) Turbo to provide high-performance shared file storage for compute instances?

A. iSCSI

B. NFS/CIFS

C. Fibre Channel

D. S3 API

Question 15 [8 Marks]

A game company deploys a global server on Huawei Cloud and uses a Layer 4 (TCP/UDP) load balancer to distribute a massive volume of requests. Which of the following describes how a load balancer distributes traffic?

A. SSL/TLS decryption: The load balancer decrypts packets and distributes them based on the IP address of each player.

B. Client certificates are authenticated in an Nginx cluster and then traffic is distributed through HTTP.

C. The load balancer forwards traffic across all nodes in the Nginx cluster and then to backend servers.

D. The load balancer forwards traffic through an LVS cluster and distributes the traffic based on the configured load balancing algorithm.

Question 16 [8 Marks]

A financial institution plans to deploy its core transaction system on Huawei Cloud, with a hybrid cloud architecture. They hope to achieve cross-AZ disaster recovery (DR), RPO = 0 (no data loss), RTO < 15 minutes (quick service recovery), and automatic failover. Which of the following Huawei Cloud backup and DR services should be used?

A. Cloud Server Backup Service (CSBS)

B. Cloud Backup and Recovery (CBR)

C. Volume Backup Service (VBS)

D. Storage Disaster Recovery Service (SDRS)

Question 17 [8 Marks]

A financial enterprise uses Direct Connect to build a hybrid cloud network and plans to configure redundant Direct Connect connections for high availability. Which of the following statements about the connection redundancy solution is false?

A. Automatic failover: If the active Direct Connect connection fails, traffic is automatically routed through the standby connection within one minute.

B. Forced route symmetry: The active and standby Direct Connect connections must use the same BGP routing policy and IP address segment. Otherwise, the switchover will fail.

C. Multiple connection locations: Two Direct Connect connections terminated at different locations in the same region can be used to eliminate single points of failure.

D. Service continuity assurance: Redundant Direct Connect connections can prevent service interruptions caused by unexpected events such as cable cuts.

Question 18 [8 Marks]

A company running an e-commerce application on Huawei Cloud is preparing for a big promotion activity. They want massive user requests to be distributed across multiple backend servers, and they want the number of servers to be automatically scaled in or out as traffic changes. They do not need to manually configure and adjust routing policies. Which of the following combinations of cloud services is the best fit for this scenario?

A. EIP + ELB

B. Elastic Load Balance (ELB) + Auto Scaling

C. NAT Gateway + Auto Scaling

D. Elastic IP (EIP) + Auto Scaling

Question 19 [8 Marks]

Which of the following network services allows Elastic Cloud Servers (ECSs) in a private network to access the Internet without exposing their private IP addresses?

A. EIP
B. NAT Gateway (SNAT)
C. VPC Peering
D. Direct Connect

Question 20 [8 Marks]

A startup plans to deploy a website on Huawei Cloud to showcase its brand. Given the website's low traffic and modest performance needs, which of the following ECS types would be the most cost-effective choice?

A. Storage-intensive
B. General-purpose
C. Memory-intensive
D. Computing-intensive

Question 21 [8 Marks]

A financial enterprise has deployed its core transaction system on Huawei Cloud. Which of the following is the most appropriate way to defend against frequent calls to APIs from malicious crawlers, SQL injection attacks on databases, and sensitive data leaks?

A. CBH
B. HSS
C. WAF
D. AAD

Question 22 [8 Marks]

A video platform plans to expand its cloud storage to support long-term retention of 4K HD video files and enable high-speed access for users worldwide. Which of the following is the most suitable Huawei Cloud service?

A. Elastic Volume Service (EVS)
B. Object Storage Service (OBS)
C. Scalable File Service (SFS)
D. Cloud Backup and Recovery (CBR)

Question 23 [8 Marks]

An e-commerce platform uses Huawei Cloud Elastic Load Balance (ELB) and Auto Scaling to distribute user requests across Elastic Cloud Servers (ECSs) with the same weight in the backend server group. However, monitoring metrics show that the CPU usage on these ECSs differs significantly. What could be the main reason for the load imbalance?

A. HTTP/2 is enabled, so the multiplexing feature changes the request allocation logic.
B. Sticky session is enabled, so the requests from the same user are routed to the same ECS.
C. ECSs with different specifications result in varying vCPU performance.
D. Health check is configured, so traffic is not routed to unhealthy servers, which increases pressure on remaining servers.

Question 24 [8 Marks]

An enterprise uses Huawei Cloud Container Engine (CCE) for containerization, and its service modules only need to communicate internally within the cluster. They do not require external access. Which Service type best supports internal service discovery and load balancing?

A. None

B. LoadBalancer

C. NodePort

D. ClusterIP

Question 25 [8 Marks]

Which of the following is the primary function of Huawei Cloud CodeArts Pipeline?

A. Code hosting and version control

B. Orchestrating and automating end-to-end continuous delivery pipelines

C. Automated UI performance testing

D. Managing container image repositories

Question 26 [8 Marks]

Which of the following database engines is fully compatible with MongoDB on Huawei Cloud?

A. GaussDB(for MySQL)

B. Document Database Service (DDS)

C. Relational Database Service (RDS)

D. Distributed Database Middleware (DDM)

Question 27 [8 Marks]

In Huawei Cloud CCE, which component running on each worker node is responsible for managing the lifecycle of Pods and containers?

A. kube-apiserver

B. kube-controller-manager

C. kubelet

D. etcd

Question 28 [8 Marks]

A company deploys multiple Elastic Cloud Servers (ECSs) on Huawei Cloud, and all these ECSs need to access Internet resources. Which of the following is an action they can take during cloud network planning to reduce their Elastic IP (EIP) costs?

A. Bind an EIP to each ECS.

B. Apply for a NAT proxy server and bind an EIP to it. The proxy server uses source network address translation (SNAT) to allow the ECSs to share the EIP to access the Internet.

C. Apply for a load balancer and bind an EIP to it, so that the load balancer can function as a proxy to allow the ECSs to access the Internet.

D. Apply for a NAT proxy server and bind an EIP to it. The proxy server can then use destination network address translation (DNAT) to allow the ECSs to share the EIP to access the Internet.

Question 29 [8 Marks]

An enterprise plans to deploy a highly available website on Huawei Cloud Container Engine (CCE), including components like the frontend and backend of the site, and the databases it needs to run. Which of the following deployment solutions is the most inappropriate?

A. MySQL deployed via Helm charts: Leveraging community Helm charts enables quick setup of primary/secondary clusters.

B. Log clearance service deployed via CronJobs: Scheduled tasks like log archiving and cleanup can be automated to run daily.

C. Nginx deployed via Deployments: Multiple pods with HPA allow Nginx to efficiently handle frontend traffic.

D. Tomcat deployed via Jobs: The application services run and automatically exit after completion.

Question 30 [8 Marks]

Enterprises deploy Huawei Cloud Content Delivery Network (CDN) so their users can obtain required content from the nearest point of presence (PoP), improving user experience. Which of the following is not a feature of Huawei Cloud CDN?

A. Edge compute power scheduling: CDN analyzes user requests and dynamically allocates GPU compute resources to process large-scale parallel computing tasks.

B. Easy access management: Customers can configure domain names on the visual CDN console and call open APIs to quickly integrate CDN with existing O&M systems.

C. Smart cache: CDN uses AICache to predict content popularity and SSD storage to improve the cache hit ratio.

D. Acceleration optimization: CDN deploys edge PoPs to shorten the content transmission distance, reducing latency and loading pages faster.

Question 31 [8 Marks]

Which of the following is the primary purpose of configuring Security Groups in Huawei Cloud VPC?

A. Route traffic between different VPCs

B. Provide stateful packet filtering and access control for ECS instances

C. Automatically scale backend instances based on traffic

D. Provide public domain name resolution

Question 32 [8 Marks]

An enterprise plans to use Storage Disaster Recovery Service (SDRS) to configure cross-AZ disaster recovery (DR) for critical service systems. Which of the following operation processes is correct?

A. 1. Enable protection. 2. Create protection groups. 3. Create protected instances.

B. 1. Create protection groups. 2. Create protected instances. 3. Enable protection.

C. 1. Enable protection. 2. Create protected instances. 3. Create protection groups.

D. 1. Create protected instances. 2. Create protection groups. 3. Enable protection.

Question 33 [8 Marks]

Which of the following is not a standard cloud computing deployment model?

A. Private cloud

B. Public cloud

C. Hybrid cloud

D. Dedicated cloud

Question 34 [8 Marks]

An enterprise needs to standardize Docker image management during containerization. Which of the following statements is false about the core features of Docker images?

A. Once you have made the necessary modifications to a container, you can use the 'docker commit' command to create a new image.

B. An image consists of multiple read-only layers. The same layer can be shared across images.

C. The latest dependencies are automatically downloaded and installed during image builds.

D. An image contains applications and their complete runtime dependency environments.

Question 35 [8 Marks]

Which of the following network services provides dedicated, high-speed, and secure physical connections between an on-premises data center and Huawei Cloud?

A. VPN

B. Direct Connect

C. VPC Peering

D. Cloud Connect

Question 36 [8 Marks]

Which of the following database services on Huawei Cloud is an enterprise-class distributed relational database based on a cloud-native compute-storage separation architecture?

A. RDS for MySQL

B. GaussDB

C. DDS

D. DDM

Question 37 [8 Marks]

A company uses Huawei Cloud Virtual Private Cloud (VPC) peering connections for cross-network communications. Which of the following statements about the core features of VPC peering connections is false?

A. A VPC peering connection can be created between VPCs in different regions.

B. VPC peering connections between VPCs that have overlapping subnet CIDR blocks may not be usable.

C. Only one VPC peering connection can be created between two VPCs at the same time.

D. A VPC peering connection can connect VPCs from different accounts.

Question 38 [8 Marks]

A financial enterprise plans to use Huawei Cloud Bare Metal Server (BMS) to meet compliance requirements. Which of the following is not one of BMS highlights?

A. Efficient deployment, provisioning within minutes, unified console, open APIs and SDKs, and self-service lifecycle management and O&M

B. Enterprise-grade security, secure and reliable services compliant with regulations

C. Improved deployment density and performance to meet the requirements of mission-critical services such as enterprise databases, big data, containers, high-performance computing (HPC), and AI

D. Manual combination with other cloud services based on the Virtual Private Cloud (VPC) model, changeable VPC for a purchased BMS

Question 39 [8 Marks]

A company plans to use IAM to manage access permissions for their cloud resources. Which of the following statements about IAM core capabilities is true?

A. Resource creation: IAM users can create resources such as VMs and databases without depending on project quotas.

B. Network isolation configuration: IAM policies can be used to define VPC network topologies and subnet division rules for physical isolation between users.

C. Fine-grained permission control: IAM supports RBAC-based API-level permission control for users and user groups.

D. Local identity synchronization: IAM automatically synchronizes all user passwords in the enterprise AD domain controller to the cloud platform.

Question 40 [8 Marks]

Which of the following monitoring services on Huawei Cloud provides real-time metric collection, alarm notification, and resource dashboard views?

A. Log Tank Service (LTS)

B. Cloud Eye

C. Cloud Trace Service (CTS)

D. Application Performance Management (APM)

Question 41 [8 Marks]

A company plans to use cloud computing services to improve IT resource management efficiency. Which of the following statements is true about the core feature of on-demand and self-service usability of cloud computing?

A. Cloud computing service providers only need to prepare the infrastructure resources. Users can complete the remaining work by themselves.

B. Users need to solve all problems by themselves when using cloud computing resources.

C. Users do not need to negotiate with service providers at any stage of using cloud computing resources.

D. Users can generate the cloud computing resource orders they need by themselves.

Question 42 [8 Marks]

An enterprise plans to deploy services on Huawei Cloud Container Engine (CCE). Which of the following is not a typical application scenario of CCE?

A. Traffic management of microservices that are built in containers for capabilities like grayscale release and traffic monitoring

B. E-commerce services that experience traffic surges during activities like promotions and flash sales and require cloud computing resources to be scaled quickly and automatically

C. Live streaming that experiences fluctuating service loads and requires real-time scaling based on CPU or memory usage

D. Core database services in key sectors, like enterprise and finance, that need to be scaled dynamically to ensure efficient operation of services and cross-region high availability

Question 43 [8 Marks]

Which of the following is not a deep learning text classification method?

A. TextCNN

B. AdaBoost

C. TextRNN

D. BERT

Question 44 [8 Marks]

Which of the following machine learning algorithms is an ensemble learning method based on decision trees?

A. K-Means

B. Random Forest

C. Logistic Regression

D. Support Vector Machine (SVM)

Question 45 [8 Marks]

Which of the following tasks is not supported by ModelArts built-in models?

A. Image classification

B. Image detection

C. Gene sequencing

D. Image segmentation

Question 46 [8 Marks]

Which of the following statements about the traditional acoustic model GMM-HMM is false?

A. Third-order HMM models are commonly used in speech recognition tasks.

B. GMM-HMM is an acoustic model. The next step is to use a language model to generate text.

C. A Markov chain, or a Markov process, is a stochastic discrete-event process that satisfies the Markov property. In this process, given the current knowledge or information, any prediction depends solely on the present state. The past is irrelevant.

D. The goal of Markov model is to learn the probabilities of state transitions based on observable data.

Question 47 [8 Marks]

Which of the following Huawei Cloud services is a one-stop AI development platform providing data preprocessing, model training, and deployment?

A. ModelArts

B. HiLens

C. Graph Engine Service (GES)

D. DataArts Studio

Question 48 [8 Marks]

Which of the following is not an application of natural language processing (NLP)?

A. Text-to-Speech (TTS)
B. Machine translation
C. Automatic abstracting
D. Public opinion analysis

Question 49 [8 Marks]

Which of the following is part of the speech synthesis process?

A. Text normalization
B. Text-to-phoneme conversion
C. Waveform generation
D. Pre-emphasis

Question 50 [8 Marks]

Which of the following is not a step in speech recognition preprocessing?

A. Feature normalization
B. Noise reduction
C. Pre-emphasis
D. Edge enhancement

Question 51 [8 Marks]

Which of the following statements about Convolutional Neural Network (CNN) applications in text tasks and image tasks is false?

A. CNN uses convolution kernels to extract local n-gram features in text-related tasks.
B. CNNs work equally well for both images and text.
C. CNNs work better with short texts than long ones.
D. CNNs typically process images as multidimensional pixel matrices.

Question 52 [8 Marks]

Which of the following statements about median filtering in image processing is false?

A. Median filtering reduces salt and pepper noise more effectively than mean filtering.
B. Median filtering improves image clarity and works effectively on pictures with Gaussian noise.
C. It is a filter of the template sorting operation.
D. It replaces the original pixel value with the median output of the pixel values sorted in the neighborhood.

Question 53 [8 Marks]

The softmax function is often used in multiclass classification models in machine learning. Which layer of a deep neural network is the softmax function mainly used for?

A. Input layer
B. Output layer
C. Pooling layer
D. Convolutional layer

Question 54 [8 Marks]

Which of the following statements about overfitting and underfitting is true?

A. Underfitting means that a model performs well during training but poorly during prediction.
B. The underfitting problem can be solved by adding training dataset samples.
C. The degradation of neural networks is not caused by overfitting.
D. Overfitting means that a model does not fully fit its training data.

Question 55 [8 Marks]

Expert systems are a key part of early AI research. To which school of AI thought do they belong?

A. Actionism
B. Bonicsism
C. Connectionism
D. Symbolism

Question 56 [8 Marks]

In what applications do Convolutional Neural Networks (CNNs) excel most?

A. Knowledge graph
B. Computer vision
C. Speech recognition
D. Machine translation

Question 57 [8 Marks]

Which of the following activation functions is non-linear and suffers from the vanishing gradient problem when inputs are very large or very small?

A. ReLU
B. Sigmoid
C. Leaky ReLU
D. ELU

Question 58 [8 Marks]

In deep learning, which of the following processes does ModelArts data management address?

A. Inference
B. Training
C. Data preparation
D. Fine-tuning

Question 59 [8 Marks]

Which of the following is a key advantage of ResNet (Residual Neural Network)?

A. Reduces model size by half
B. Mitigates the vanishing/exploding gradient problem in deep networks using residual connections
C. Eliminates the need for activation functions
D. Enables unsupervised learning on unlabelled images

Question 60 [8 Marks]

Which of the following ModelArts training parameters is used to customize hyperparameters during algorithm tuning?

A. Compute Nodes
B. Resource Pool
C. Algorithm Type
D. Hyperparameter

Question 61 [8 Marks]

Which of the following is the mathematical foundation of the backpropagation algorithm in neural networks?

A. Matrix transposition
B. Chain rule of calculus
C. Fourier transform
D. Monte Carlo simulation

Question 62 [8 Marks]

Which of the following is a feature of the architecture of Huawei Ascend 910 AI chips?

A. MIPS
B. Da Vinci architecture
C. Von Neumann architecture
D. x86

Question 63 [8 Marks]

Which of the following metrics measures the ratio of true positive predictions among all positive predictions made by a model?

A. Recall
B. Precision
C. Accuracy
D. F1-Score

Question 64 [8 Marks]

Which of the following statements about Large Language Model (LLM) training is false?

A. The development cost is high.
B. A single processing unit (PU) usually handles the entire model.
C. There is usually petabyte or terabytes of data involved.
D. There are billions to trillions of parameters.

Question 65 [8 Marks]

Which of the following statements about the function of the update gate in a GRU (Gated Recurrent Unit) is true?

A. It determines the influence of the previous hidden state on the current candidate hidden state.
B. It adjusts the learning rate.
C. It controls the path of gradient backpropagation.
D. It manages long-term dependencies.

Question 66 [8 Marks]

When using a 5 x 5 convolution kernel to perform convolution on a three-channel color image without bias, which of the following is the total number of parameters that need to be learned?

A. 76
B. 75
C. 25
D. 26

Question 67 [8 Marks]

Which AI framework was independently developed by Huawei to support full-scenario AI development across cloud, edge, and device?

A. TensorFlow
B. PyTorch
C. MindSpore
D. Caffe

Question 68 [8 Marks]

Which of the following activation functions ranges from 0 to positive infinity?

A. ELU
B. Tanh
C. ReLU
D. Softmax

Question 69 [8 Marks]

Which of the following compute resources can be selected when you create a training job on ModelArts?

A. CPUs
B. GPUs
C. TPUs
D. NPUs (Ascend)

Question 70 [8 Marks]

Which of the following optimization algorithms uses both momentum and adaptive learning rates for neural network parameter updates?

A. SGD
B. AdaGrad
C. Adam
D. RMSprop
